

CorelDraw 9 Fonts vs. CorelDraw 11 Fonts

In this document, we compare the Western Europe Encoding PostScript Type 1 fonts of CorelDraw 9 (also offered by Corel as TrueType fonts) with the Western Europe Truetype fonts of CorelDraw 11.

Source (as per Notice)	CorelDraw 9 PS Fonts	CorelDraw 11 TT Fonts
1. Unknown Source	20	4

3. Esselte Letraset Ltd.	33	0
4. URW Software	95	0
5. Bitstream Inc.	852	841
Total Number of Fonts	1070	851

CorelDraw 9 includes 219 additional fonts, especially those by Corel, Esselte Letraset and URW, which are missing in CorelDraw 11. Both versions of CorelDraw include nearly the same number of Bitstream fonts with minor differences. For instance, CorelDraw 9 contains 2 Weidemann font cuts, whereas CorelDraw 11 contains 4 Weidemann fonts. Font comparisons on the basis of font names are not possible, since Bitstream Inc., presumably after having been sued, changed many names. E.g. "Elegant Garamond", Bitstream's forgery of "Granjon", was later renamed to "ElegaGarmnd". However, Bitstream made a mistake. It did not change the TrueType unique identification record which still contains the old name "Elegant Garamond" and also another fancy name "Aldine 424" used elsewhere for Bitstream's forgery of the "Granjon" font designed by George W. Jones in 1924, at a time when Bitstream did not yet exist, so that the copyright year "1990" has also been forged.
